INNOVATORS

Maroor's[™]
S I N C E 1 9 5 8

Established in 1958, Maroor's has been the most leading and trusted name for quality in and around coastal Karnataka. With each product, they have taken pride in setting high standards in the global market. Through ethical trade practices Maroor's have been following the philosophy of goodwill with every bill. Over time the business entity has achieved several accolades for their quality and timely delivery of products.

With a commitment to protect the environment Maroor's have ventured into manufacturing eco-friendly products. To fulfil the changing needs of the society Maroor's have introduced uPVC windows.

uPVC Windows

Unplasticised Poly-Vinyl-Chloride or simply called as uPVC is a compound developed after thirty years of intensive research by professionals. It is one of the key components used in the manufacturing of windows, doors, shutters, automobile body parts and other building materials. uPVC bears the quality that the modern technology demands. uPVC is cost efficient product with high durability and long lasting performance.

uPVC as an excellent insulator provides better thermal and acoustic properties. It is corrode resistant and does not flak or peel making it last longer. The window has been tried and tested in America and Australia and proven that it can withstand any harsh condition over sixty years. With multi locking system it provides high security too.

AT WORK

Maroor groups have launched uPVC windows, a new range of products to keep in tune with changing technology. uPVC is proven eco-friendly and hence it has become an essential substance of our products.

With the state-of-the-art manufacturing unit, Maroor Impex located at Baikampady, Mangalore is where it all begins. This one of a kind unit is equipped with international standard machinery and equipments and professionally skilled employees. uPVC windows are manufactured from world class raw materials, owing to standards set by Maroor's.

A hand in a pink sleeve reaches towards a black alarm clock on a white windowsill. To the left of the clock are two potted plants, one in a yellow pot and one in a pink pot. The background is a bright window with white frames. Below the windowsill is a white bed with a white pillow and a white sheet. A pink storage box is visible on the left side of the bed.

FRAMING YOUR

Advantages of Venster uPVC Windows

- Durable, stable and resistant
- Withstands dust, wind and sea water
- Cost Effective
- Excellent Insulator
- Requires only regular light soapy wash
- Custom made
- Flexible Opening systems
- Maintains internal temperature
- Recyclable often as 10 times
- Free from flaking, fading, rotting and peeling off
- High security
- Chemical proof
- Prevents Acoustic disturbances
- Highly energy efficient
- Quality defined through rigorous testing
- Low maintenance
- Flame retardant
- Prevents enhancement of accidental fire
- Thermal Insulation
- Resilient of pollutants and termites

BEAUTIFUL VIEW

Types of windows

Sliding Windows:

The sliding windows are used if the windows should not be tilted or turned for opening. It is ideal for limited spaced homes. It is most suitable for balcony, terrace and indoor application. The tracks are made of stainless steel and the low friction adjustable tandem roller allows the panels to slide freely for years.

Casement windows:

The windows and doors are hinged at sides in Casement window. The customer can opt for either inside or outside opening windows. The grills are offered to provide better security. For the outside opening window the security grills have either to be fitted inside, which makes it difficult to clean the window or if put outside, designed in such a way that there is sufficient space to open the window. The inside opening allows better and easy cleaning as security grills are fitted from outside.

A SIGHT

TO BEHOLD

Tilt & Turn Windows:

The tilted position is a burglar proof partial opening to ventilate the building without any danger of intruder entering through opening of the window. In the tilted position it channels the flow of outside air into the room, while allowing hot air to escape through the top. This type of window can also be kept open during the rainy season. In turning position the window can be opened fully. This type of windows can be cleaned on both sides from the inside without any hassle. A quarter turn of the handle opens the window fully; another quarter turn will tilt the window.
